

NOTE: This is a single chapter excerpted from the book Pediatric Bone, made available for individual purchase. Additional chapters, as well as the entire book, may be purchased separately. Pediatric Bone is the first book to be published to deal exclusively with the biology and diseases of bone as they affect children. Rapid advances have been made in our understanding of the mechanisms and factors controlling the growth and development of bone, and these are discussed in detail in this book. Further, the various diseases of bone which are peculiar to children are highlighted and discussed in the light of our current knowledge with regard to the causation, clinical signs and treatment. The book is aimed to provide those clinicians interested in children's diseases and basic scientists with a comprehensive resource covering the various aspects of bone health and disease in children. Key Features* Deals exclusively with bone development and diseases of children and each chapter written by an * Fully referenced providing an appendix of usually difficult to find information on the investigation of pediatric bone disease and reference values* Covers both the physiology of bone and mineral homeostasis in children and diseases in one book* Includes a CD-ROM of images

Drawings of Thomas Rowlandson in the Paul Mellon Collection, A Tankful Of Motoring Jokes, The Lower Sort: Philadelphia's Laboring People, 1750-1800 (Cornell Paperbacks), Spiritual Message of Dante, Tourism and Citizenship: Rights, Freedoms and Responsibilities in the Global Order (Contemporary Geographies of Leisure, Tourism and Mobility),

Mineral and bone metabolism are regulated differently in utero compared with the adult. The fetal kidneys, intestines, and skeleton are not dominant sources of . Fetal. Mineral. Homeostasis. Christopher. S. Kovacs. FIGURE Fetal This chapter will also show that PTH-related protein (PTHrP) is a major. Furthermore, Pthrpnull fetuses showed normal skeletal mineral content in the Kovacs, C. S. () Fetal mineral homeostasis, Chapter 11, in Pediatric Bone. Chapter 1. Skeletal Morphogenesis and Embryonic Development (Pages:). Yingzi Yang CHAPTER 11 Part 3: Mineral Homeostasis.

Hypocalcemia. and. other. abnormalities. of. mineral. homeostasis Placental transfer of calcium from mother to fetus sustains a calcium content of 20 –30 g in the full-term infant. Neither parathyroid hormone (PTH) Chapter
