

As governments and institutions work to ameliorate the effects of anthropogenic CO<sub>2</sub> emissions on global climate, there is an increasing need to understand how land-use and land-cover change is coupled to the carbon cycle, and how land management can be used to mitigate their effects. This book brings an interdisciplinary team of 58 international researchers to share their novel approaches, concepts, theories, and knowledge on land use and the carbon cycle. It discusses contemporary theories and approaches combined with state-of-the-art technologies. The central theme is that land use and land management are tightly integrated with the carbon cycle and it is necessary to study these processes as a single natural-human system to improve carbon accounting and mitigate climate change. The book is an invaluable resource for advanced students, researchers, land-use planners, and policy makers in natural resources, geography, forestry, agricultural science, ecology, atmospheric science, and environmental economics.

2016 Cougar Media Guide: JHS Baseball Program, Anodized!: Brilliant Colors & Bold Designs for Aluminum Jewelry (Lark Jewelry Books) (Paperback) - Common, Prosa selecta (Spanish Edition), The jurisdiction of federal courts, as limited by the citizenship and residence of the parties, Der kleine Kuchen von der Pfann - Band 1-4: Das Wissensbuch - kurze Bilderbuchgeschichten in Reimen über einen kleinen Pfannkuchen (German Edition),
