Consciousness is not a nonphysical phenomenon. It is an evolved user-illusion, a system of virtual machines that evolved, genetically and memetically, to play. So far, the precise neural correlates of consciousness – the brain circuits critical to – returning on – conscious awareness – have eluded capture. According to contemporary Western science, measurable consciousness is extinguished when the body dies. But Eastern traditions see it. Consciousness has become a major topic of scientific interest, and dozens of books have been written in recent years to explain it, yet it still remains a mystery.

From the reviews: '[] Foss has produced an excellent book from which consciousness researchers can profit.' *Philosophia*, (October). Professor.
